

Final Project proposal

Name: Jianwei Zhang

NUID: 001447259

Aim

In this project, we will build a People`s relationship Mangement System, which implements the function of managing the infomation of People.

The functions including basic CRUD operations such as: List People, Add People, Update People, Delete People. All the functions will be accessible in Web Browser and update to database in realtime. We will use Spring MVC and Hibernate to implement the project. Data will be stored in MySQL database.
